Professional experience

11/2025 – present

Geospatial Data Specialist · Beagle Systems, Hamburg

Beagle Systems flies long-range drones beyond visual line of sight (BVLOS) to monitor pipelines, utilities and other infrastructure.

- Developed an open-source drone LiDAR pipeline that georeferences point clouds with PPK, classifies power-line scenes, rebuilds missing conductors from their sag and rates nearby vegetation by risk; tree-fall analysis in progress.
- Built an AI-driven right-of-way and construction-site monitoring pipeline: deep-feature-matching georeferencing, a fine-tuned foundation model for detection, an open-source VLM to verify it, and real-time inference on an NVIDIA Jetson.
- Fine-tuned a building-segmentation foundation model on in-house labels created from 10 cm orthophotos and scaled it across the Cologne area.
- Built a PostGIS and TiTiler backend that serves large GeoTIFFs to the frontend as map tiles, and supported flight planning with pre-flight checks and new geodatabase data.

03/2024 – 10/2025

Geospatial (EO) Data Scientist, part-time · Karuna Technology UG, Germany

- Differential InSAR pipeline with ISCE: automated acquisition, preprocessing and interferogram generation.
- Google Earth Engine workflows for Sentinel-1 time series (Refined Lee filter) feeding a soil-moisture ML model.
- Urban tree-species classification from fused multispectral and SAR data; training data for tree-crown segmentation.
- Vector data pre- and post-processing in QGIS.

04/2021 – 02/2024

GIS & RS Specialist · MapTransfer, Germany

- Spatial data workflows for a construction company: georeferencing, orthophoto mosaics, cloud-optimized GeoTIFFs on AWS, PostGIS–QGIS integration.
- In-house courses on LiDAR in QGIS and spatial data analysis; course development for Spatial SQL, ALKIS and GeoServer.
- Geodata management and visualization for a telecom project based on ALKIS.
- Web GIS: PostGIS vector layers in OpenLayers.

Education

2017 – 2020

MSc Geology · University of Freiburg, Germany

- Thesis: Simulation of multispectral and hyperspectral imaging techniques for mapping of epithermal ore deposits in vegetated zones.

2016 – 2020

MSc Remote Sensing & Geographic Information System · National University of Sciences and Technology, Pakistan

- Thesis: Development of an open-source Python-based slope stability model that incorporates remote sensing and geotechnical data for slope failure assessment.

2012 – 2015	**BSc Geology** · Bahria University, Pakistan ○ Thesis: Petrophysical analysis of Joya Mair – Well 4.

Academic projects

Landsat · Sentinel-2	Glacier mass balance of Mýrdalsjökull from historical imagery and DEMs: the melting rate doubled after 2000.
MODIS · TRMM	Snow cover and precipitation variability, 2000–2015.
Landsat 7	Snow-cover change in the Kabul Basin and its impact on water resources.
Landsat 8 · ASTER	Land cover, erosion and morphometry of Mauna Kea.

Further training

2022	NASA Applied Remote Sensing Training (ARSET): five trainings on SAR-based disaster assessment, flood monitoring and modeling, crop mapping with polarimetric SAR and optical data, air-quality model output, and pre- and post-fire monitoring. UNAVCO / GAGE short course: InSAR processing and time-series analysis for geophysical applications (ISCE, ARIA-tools, MintPy).

Skills

GIS	ArcGIS Pro, QGIS, ArcMap
Remote sensing	Multispectral, hyperspectral and SAR data; ENVI, ERDAS Imagine, eCognition, ESA SNAP
LiDAR	CloudCompare, WhiteboxTools; DEM and DSM generation
Cloud	Google Earth Engine, AWS (EC2, S3)
Databases	PostgreSQL/PostGIS, SpatiaLite, DuckDB, SQL
Programming	Python (GDAL, Fiona, Rasterio, scikit-learn, TensorFlow, Cartopy), R, Spatial SQL, Bash
Machine learning	CatBoost, CNNs, fine-tuned foundation models, VLMs
Web mapping	Leaflet, OpenLayers, GeoServer, TiTiler
Other	Git, LaTeX, Microsoft Office

Languages

English	C2
German	B2
